

FINE VINES

WEBSITE REBUILD · PROPOSAL & SCOPE

A portfolio the whole internet can find.

A fast, elegant, self-updating website for the Fine Vines trade portfolio — discovered by Google and by the AI assistants your buyers now ask first.

Pouring elegance with a sommelier's touch.

Date

July 2, 2026

THE OPPORTUNITY

Your catalog is your best salesperson. Let's make it findable.

Fine Vines represents some of the world's top producers — but today that story lives inside systems that search engines can't read. We'll rebuild it so **every wine becomes its own fast, findable page**, the catalog refreshes itself from your own systems, and your team can post news in minutes — all for a hosting bill measured in pocket change.

THE SHORT VERSION

A beautiful, lightning-fast site that Google and AI assistants love, that updates itself nightly from Salesforce, and that your team keeps current by simply *talking to Claude*.

WHAT IT LOOKS LIKE

The design, already taking shape

These are real screens from the working prototype — the old-world palette, the high-contrast typography, the cold-chain “handled like fresh produce” story. We’ll refine it into the finished site, but the direction is set: confident, editorial, and unmistakably a fine-wine house.

[View the live prototype →](#)

Homepage. A striking first impression in the brand’s bordeaux and brass, leading straight into the portfolio and the “Become a Customer” path.

Search & filter. Buyers narrow 200+ wines instantly by producer, varietal, region, vintage, size and style — the fast, faceted browsing wholesale buyers expect.

Every wine, its own page. Description, sommelier notes, and full technical specs — each with its own web address that Google can index and AI can cite.

News & events. Tastings, new arrivals, producer visits — posted by your team in minutes through Claude.

Featured producers. The families behind the bottles, presented with the same editorial care as the wines themselves.

HOW IT WORKS

Your systems fill the site. Automatically.

A small program runs on a Windows machine at Fine Vines. On demand and every night, it reads your live catalog, enriches it, and publishes the finished site. No servers to babysit, no manual copy-paste.

STEP 1 · PULL

Salesforce

Reads every wine that qualifies for the web — in stock, and not a non-catalog SKU.

AUTOMATIC

STEP 2 · ENRICH

Descriptions & images

Adds tasting descriptions, sommelier notes, and a label image for each wine.

AI-ASSISTED

STEP 3 · BUILD

The website

Generates a fast, standalone page for every wine, plus search, news and sitemaps.

AUTOMATIC

STEP 4 · PUBLISH

Bunny.net

Uploads only what changed and refreshes the live site worldwide in seconds.

AUTOMATIC

Runs **on demand** whenever you want an update, and **automatically each night**. New wines appear on their own; sold-out wines drop off — no one has to remember to do it.

Great for Google SEO — and for AI SEO

This is the heart of the rebuild. Because every page is delivered as clean, complete HTML — not assembled in the browser like the current file — both search engines and AI assistants can read it perfectly. That’s the difference between being *online* and being *found*.

GOOGLE SEO

Every wine is its own indexable page

Thousands of pages, each with a unique title, description, and structured “Product” data, plus an auto-generated sitemap. That’s how you win searches like “Barolo Cannubi 2018 Illinois distributor.”

AI SEO · THE NEW FRONTIER

Cited by ChatGPT, Claude, Gemini & Google AI

Buyers increasingly *ask an assistant* before they search. Clean, semantic pages are exactly what those models read and quote — so Fine Vines shows up in the answer, not just the results.

PERFORMANCE

Near-instant page loads

Static pages with no database and almost no JavaScript. Speed is both a better buyer experience *and* a direct Google ranking factor.

TRUST SIGNALS

Structured data & rich results

Producer, region, varietal and vintage are marked up so search and AI understand each wine precisely — opening the door to richer, more prominent listings.

A quick look: today vs. what this unlocks

We actually checked. Your live site, **finevines.com**, is already in Google — homepage, portfolio, about, news, plus producer and individual-wine pages. So the problem isn’t visibility. It’s two other things. First, the current **wine listing is painfully slow** — it often crawls, and sometimes won’t load at all, which costs you buyers and rankings alike. Second, the beautiful rebuild, shipped as it stands today, would *erase* that Google footprint entirely.

WHAT “THE PROTOTYPE ALONE” MEANS BELOW

The new design you’ve seen is, right now, a single JavaScript file that assembles itself in the browser. Search engines can’t read that — so launching it as-is would quietly wipe out the Google presence you have today. Pre-rendering every page (this system) is exactly what prevents that *and* fixes the speed problem.

SIGNAL GOOGLE REWARDS	TODAY (FINEVINES.COM)	THE PROTOTYPE ALONE	WITH THIS SYSTEM
Pages Google can read	CMS pages	None — one JS file	Every page, pre-rendered
A page per wine	Some	No	All 5–10k
Structured data & rich results	Limited	No	JSON-LD on every wine
Page speed (a ranking factor)	Often stalls / won’t load	Heavy JS	Near-instant static
Citable by AI assistants	Unlikely	No	Built for it

SIGNAL GOOGLE REWARDS	TODAY (FINEVINES.COM)	THE PROTOTYPE ALONE	WITH THIS SYSTEM
Keeping it current	Manual CMS	Manual	Auto-synced nightly

Checked July 2026 against your live site — a read on public indexing, not a formal audit. The projection is straightforward: you keep the footprint you have and add per-wine reach, structured data, speed and AI visibility on top.

Wired into Google Analytics & Search Console from day one

A site you can't measure is a site you're guessing about. We connect Fine Vines to Google's own free tools so you can see exactly who's visiting, what they look at, and how you're showing up in search — no extra software, no monthly fee.

GOOGLE ANALYTICS 4

Who's visiting, and what they browse

Traffic by day, source and location; which wines and producers get the most attention; how buyers move from the portfolio to “Become a customer.”
Installed site-wide and privacy-respecting.

GOOGLE SEARCH CONSOLE

The exact searches that find you

See the real Google queries bringing buyers in, your average ranking for each, and which wine pages earn the most clicks — a direct feedback loop for the whole catalog.

INDEXING & SITEMAPS

Confirm Google sees every wine

We verify the property, submit the auto-generated sitemap, and confirm your thousands of pages are indexed — then watch coverage as new wines publish.

HANDOVER

Your accounts, your data

Everything is set up under Fine Vines' own Google account, so the analytics and search data are yours to keep, share, and act on.

FAST & INEXPENSIVE

A flagship site that costs like a hobby project

Because the site is **static** — just files, no live server or database — it's hosted on **Bunny.net**, a global content network. That means it's served from close to every visitor for blazing speed, with essentially nothing to hack and almost nothing to pay. A result this polished on a budget this small isn't the norm — it comes from 25 years of experience and building it right.

Under \$10

TYPICAL MONTHLY HOSTING

No application server, no database license, no per-seat platform fee. You pay pennies for storage and traffic.

Global

DELIVERED FROM ~120 LOCATIONS

Bunny's network puts your pages physically near every buyer, so the site feels instant wherever they are.

Hardened

NOTHING LIVE TO ATTACK

With no server-side code running, the whole class of database and login vulnerabilities simply doesn't exist.

I click

DEPLOY & CACHE REFRESH

Publishing is a single command that uploads changes and refreshes the worldwide cache in seconds.

Barb runs the site by talking to Claude

The wine catalog maintains *itself* from Salesforce. For everything human — posting a tasting, announcing an arrival, adding an event — Barb uses a purpose-built **Claude skill** we'll create for Fine Vines.

WHAT THAT FEELS LIKE IN PRACTICE

Barb opens Claude and says, “*Add a news post: Spring Portfolio Tasting, April 18 at the Old Post Office in Chicago.*” Claude writes it in the Fine Vines voice, adds it to the site, and publishes it — no HTML, no logins, no ticket to file.

- ✓ **Live in minutes, not days** — a post goes up the moment Barb asks for it, from anywhere.
- ✓ **On-brand automatically** — the skill knows the Fine Vines tone and formatting.
- ✓ **Installable across your team** — delivered through your own private Claude marketplace.

ABOUT US

A service company, first and last.

The About page keeps Fine Vines' own words. The team is the sales force, the drivers, and the warehouse and support staff — everyone focused on the best possible service to customers and suppliers. Every product is handled under proper temperature and humidity: orders picked with care and loaded in a temperature-controlled warehouse.

The sales team carries a combined **200+ years** in the wholesale wine, retail and restaurant trade — and training your staff is part of the service. Need information, technical specs, or an in-person session? Just ask.

Rebuilt, that story keeps its voice and gains a proper roster. Each person gets a portrait, their role, a direct email, and one warm line that shows they know wine — people a buyer wants to call, not a directory.

OFFICE MANAGER

*"The voice that answers
when you call."*

barb@finevines.com

The real Fine Vines team, names and emails as they are today. Portraits and the one-line notes are examples for the proposal — real photos and each person's own words drop straight in.

KEPT CURRENT BY CLAUDE — A SECOND SKILL

People come and go. A second purpose-built skill maintains this page: *“Add Maria Reyes to Sales, maria@finevines.com”* or *“remove someone who’s moved on and take their email off the site.”* Claude updates the About page, drops in the portrait and their line, and republishes — names and email addresses managed without touching code.

Our approach — and the assumptions to confirm

Getting a great-looking, well-described page for thousands of wines is the interesting challenge. Here's exactly how we plan to handle it, stated plainly so you can sign off with eyes open.

Descriptions & sommelier notes

For wines that lack rich copy in Salesforce, we generate a tasting description and sommelier-style notes with AI, grounded in the real facts we have (producer, region, varietal, vintage, style). You can review, edit, or lock any of it.

Label & bottle images

We don't scrape random photos off the web. The enrichment step **generates** each wine's image from its own details: Claude writes a tailored prompt per wine, an image model (the kind behind ChatGPT) renders a photorealistic bottle, and a deterministic vector-label engine is always there as the guaranteed fallback. Every wine ends up with a finished, on-brand image — nothing shows a broken tile — and official producer photography drops straight in whenever you have it.

Pouring elegance with a sommelier's touch, right down to the label.

A WINE FOR A BURGUNDY MAN

Give it a name; it returns a finished bottle

Hand the generator nothing but a name and a few details and it produces a complete, photorealistic bottle — engraved label, foil capsule, the works. Here it is for George Molitor.

BY REQUEST · FOR A BURGUNDY MAN

A wine for George Molitor

Handed a name and a hint of pedigree, the generator returns a finished, three-dimensional bottle ready for the site. For George we didn't reach for a table wine — this is a **La Tâche Grand Cru Monopole, 1990**: Vosne-Romanée at the very summit of Burgundy, in a legendary vintage. Moulded glass, foil capsule, engraved estate label.

If we're going to invent a cellar for a man who knows French wine, we're going to invent the good stuff.

TEN LOOKS FROM ONE NAME

One generator, a whole design system

The label engine isn't a single template. To show its range we handed it the names of your own team — ten people, ten different treatments: classic château, noir prestige, art-deco, minimalist, heraldic, rosé, champagne and more, each fully *branded to the wine*. In production it picks a treatment that suits each wine's region, colour and style.

CLASSIC BORDEAUX

NOIR PRESTIGE

ART DÉCO

MINIMALIST

HERALDIC

MODERN

ROSÉ

GRAND CRU

VICTORIAN

CHAMPAGNE

One label for every member of the Fine Vines team — pure generated artwork from a single name, no stock images and no designer.

ASSUMPTIONS WE NEED YOU TO CONFIRM

- 1. Imagery is generated, not scraped.** Every wine's bottle image is generated from its own data — an AI-rendered bottle with the vector label engine as a guaranteed fallback — so there are no stock-photo licensing worries and never a broken tile. Official producer photos swap in whenever you have them. Confirm you're comfortable leading with generated imagery.
- 2. QuickBooks is the source of truth** for the catalog and inventory. Because QuickBooks already syncs to Salesforce, the sync program reads the wine data from that existing synced layer — no new QuickBooks integration to build.
- 3. Web-eligibility rule:** a wine appears on the site when it's **in stock** and its Salesforce SKU **does not start with 9**. Confirm this is correct.

Deliverables

- ✓ **A rebuilt, fully static website** — homepage, portfolio, per-wine pages, news & events, about, contact — refined from the current design.
- ✓ **Best-in-class SEO & AI-SEO** — per-wine indexable pages, structured data, and automatic sitemaps.
- ✓ **Faceted search** across the full portfolio by producer, varietal, region, vintage, size and style.
- ✓ **A Windows sync program** that pulls from Salesforce, enriches wines, and publishes — on demand and nightly.
- ✓ **Automatic label imagery** with a branded, wine-branded generated-label fallback for every wine.
- ✓ **A downloadable Credit Application** (PDF) with a one-click download button, matching the current site.
- ✓ **Two Fine Vines Claude skills** — one for news & events, one for the About page (add/remove people, names & emails) — delivered via your private marketplace.
- ✓ **Google Analytics 4 & Search Console** set up under your account, with the sitemap submitted and indexing verified.
- ✓ **One-command deployment** to Bunny.net with automatic cache refresh.

Not included in this phase: e-commerce / online ordering and customer logins — each can be added later on this same foundation.

What the rest of Chicagoland’s sites don’t do

We looked at the field — Louis Glunz, Candid Wines, Cream Wine and the broader Chicago distributor directories. The pattern is clear: most are handsome brochure sites (several on Wix) with **no searchable catalog on their own domain**. The real, filterable catalog is rented from **SevenFifty / Provi** — a shared B2B marketplace where a distributor is one vendor among hundreds and earns no search credit for its own site.

WHAT BUYERS ACTUALLY USE	TYPICAL CHICAGOLAND SITE	FINE VINES · FULL BUILD
Searchable catalog on its own domain	Rented from SevenFifty	Yours, on finevines.com
A page per wine, indexed by Google	Rare	All 5–10k
Shows up in AI-assistant answers	No	Built for it
Fast, modern site	Often Wix / dated	Near-instant static
Tasting-knowledge content for search	No	Knowledge hub
Owens its traffic & customer data	No — third-party	Yours outright

THE OPENING NOBODY’S TAKEN

Fine Vines already has per-wine pages — more than Glunz or Candid — they’re just slow today. The full build makes them fast, searchable and structured, and adds AI-search visibility none of the competition has. First mover owns “who distributes [producer] in Illinois?” in the Google *and* the AI answer.

Two ways to start

Fixed-fee pricing. Start lean with a fast static refresh, or commit to the full build — both sit on the same foundation, and every line is modular.

Start lean — the quick win

Rebuild the current site as fast static pages on Bunny.net — the fastest path to a faster site, and the same foundation the full build sits on.

COMPONENT	WHAT IT INCLUDES	EFFORT
CORE Static website rebuild	Rebuilds all current pages as clean, fast static HTML, refined and fully responsive.	\$3,000
CORE Move to Bunny.net	Storage + pull-zone setup, domain/DNS, cache configuration, and a one-command publish workflow.	\$600
CORE URL discovery & redirect script	Crawls and catalogs every current finevines.com URL, then generates the script that rewrites each old page to redirect to its new location.	\$600
CORE Redirects from the current site	Publishes those redirects live, so every old link keeps working and your Google footprint carries over intact.	\$900
Start lean — live, fast, on Bunny		\$5,100

The full build — the art of the possible

The dynamic wine catalog, a page per wine, faceted search, AI enrichment and outreach — all on top of that same static foundation. Pick the lines you want.

COMPONENT	WHAT IT INCLUDES	EFFORT
CORE Website & catalog rebuild	Refines the prototype into all final pages (home, portfolio, wine detail, news, about, contact), fully responsive — including the catalog page with fast, faceted filtering across producer, varietal, region, vintage, size and style. Because it's pre-rendered, every wine gets its own indexable page with JSON-LD structured data, canonical tags and an auto sitemap — SEO-ready by construction.	\$5,100
CORE Wine enrichment (text & imagery)	One AI pass over the whole catalog: a tasting description and sommelier notes for every wine, plus a generated bottle image (Claude-written prompt → image model, with the vector-label engine as the guaranteed fallback). The catalog isn't worth showing without it — so it's Core.	\$1,800
CORE Sync program & deploy	Go EXE: reads Salesforce, applies the eligibility rules, incremental nightly/on-demand runs, Bunny.net deploy + cache purge.	\$2,400
CORE Redirects from the current site	Maps every existing finevines.com URL to its new page so your Google footprint carries over intact — no lost rankings on launch day.	\$900
CORE About-page team skill	A Claude skill to add/remove people — names, roles and emails — and republish, no code.	\$300
CORE Launch	Initial 5–10k-wine enrichment run, full QA, and go-live on your domain.	\$1,500

COMPONENT	WHAT IT INCLUDES	EFFORT
OPTION Wine-knowledge hub	Much more of Fine Vines surfacing on Google and in AI answers. Publishing real tasting knowledge — guides, pairings, region & varietal primers — gives search engines and assistants far more of your expertise to index and cite, pulling in buyers who are searching the <i>subject</i> , not just the brand.	\$2,400
OPTION Statewide prospecting engine	AI scrapes public listings of licensed retailers & restaurants across Illinois, builds a targeted account list, and auto-populates the cold-email campaign — a whole-state outreach machine.	\$1,800
OPTION Customer email blasts	A Claude skill that drafts and sends targeted blasts to existing customers — clearing old stock, new arrivals, special products — in the Fine Vines voice.	\$1,200
OPTION Cold outreach & lead-gen	A Claude skill for cold emails and prospecting to win new licensed retail and restaurant accounts.	\$1,200
OPTION News & Events skill	A Claude skill that writes each post into a news JSON file. At build time the site generates the News & Events landing page <i>and</i> an individual, indexable page for every post — the same JSON-driven, pre-rendered approach as the wine catalog, so each tasting or event is its own findable URL. Written in the Fine Vines voice, via your private marketplace.	\$900
OPTION Analytics & Search Console	Google Analytics 4 + Search Console under your account, sitemap submitted, indexing verified.	\$600

COMPONENT	WHAT IT INCLUDES	EFFORT
OPTION Credit Application PDF	Hosted credit-application PDF with a one-click download button, matching the current site.	\$300
FUTURE Retire Salesforce	When you're ready, go straight from QuickBooks to the site and cut Salesforce out of the loop entirely. Scoped when you want it.	<i>Let's do it</i>
Core — a live, self-updating catalog with search		\$12,000
Everything — Core + all options		\$20,400

NEXT STEPS

Ready when you are.

Give the nod on the direction and the three notes above on wine data and imagery, and we'll move straight into the detailed build plan — starting with the site itself so you can see real pages come to life quickly.
